The Oponentus® Solution differentiates itself from other solutions

Cumbersome administration	Other solutions	The Oponentus Solution	Simple administration
Tournament manager must login to the PC	Tournament manager creates the tournament. If officials are to be used, the tournament manager must contact them and check whether they are available, and must then possibly register and select these officials from a menu. Tournament manager must set the venue times manually. There is no connection to venue booking, so venues must be booked separately using yet another solution. Once the tournament has been created, it must be exported to the Internet in order for the players to be able to see the information and register themselves. Only the tournament manager can communicate the results.	The tournament manager creates the tournament and reserves the venues for the matches. If the arena uses our venue booking, the booking system will be updated simultaneously with the time/location for each match being stored. Tournament managers can delegate the task of communicating the results to either the players, the officials or the tournament managers themselves.	Tournament manager must login to the PC

		If officials are to be used in the tournament, invitations for the officials are automatically generated after the tournament has been created. The judges will register themselves during the time period the system is open for such in the tournament schedule.	
	The players will then subsequently be able to register. Some software suppliers offer an online payment solution, but not everyone uses it, possibly because it represents too much of an incremental cost. If the clubs do not use online payment solutions, the tournament manager must collate payments against registrations and note when players have paid.	Invitations are generated for players. Players register. When a registration fee is required, the players must pay in order to register. The tournament manager avoids having to collate payments with registrations. The payment solution will be reasonable to operate and simple to place into service.

	some extracts and generate forms. Then messages must be generated for the players concerning when and where they are to play the first match, and possibly that they can find the times of their matches in the tournament match schedule on the Internet.	for the players has expired.	
The tournament manager must login on the PC, probably several times.	When the results from the matches arrive, the tournament manager must go into the software again and enter the results manually. The tournament manager's assistants will gather together the results, and then the tournament manager will enter them as often as possible. The table on the club's board is possibly updated by hand or the tournament manager will print out an updated form. The player's rating is updated by the association in a separate system, in tennis once per month or every other month.	Messages are automatically generated for the players concerning where and when they are to play their matches.	

		Results are entered by either the officials, tournament manager or the players themselves. Ratings are updated automatically when results are entered after each match.	

Other differences

	Other solutions	The Oponentus Solution	
	No other all-in-one solutions are available with an equally effective methodology for conducting tournaments.	Also offers online member administration, online booking and a recognised rating methodology wrapped up in the same solution.	
	Functioning at present, but has a slew of limitations.	Represents the best point of departure for further development.
